

Colorado Fluorescent Lamp Bans: A Quick Guide

What You Need to Know:

If you manage a facility in Colorado, you need to be aware of the new bill (HB23-1161 Section 8). Section 8 establishes the “Clean Lighting Act” to phase out the sale of general-purpose fluorescent light bulbs that contain mercury. With certain exceptions, on and after January 1, 2025, a person shall not manufacture, distribute, sell, or offer for sale in Colorado any linear fluorescent lamp or compact fluorescent lamp.

Who's Affected?

All Colorado facilities using fluorescent lamps.

- All linear fluorescents with a CRI of 86 or higher.
- All tube diameters and lengths, from PL and spiral to twin tube, triple, 2D, U-bend, and circular.
- Tube diameters (T5, T8, T10, T12) and lengths from 0.5 to 8.0 feet.
- Various types of linear fluorescent lamps, including single-pin, two-pin, and recessed double contact.
- Shapes like linear, U-bend, and circular are included in the transition.

Why LED?

- Fluorescent bulbs contain Mercury, which can pose health and safety risks.
- 50% or greater reduction in energy savings.
- Enhanced safety and reduced environmental impact.
- Increased fixture and component life for less maintenance and increased productivity.
- Greater light quality and illumination than fluorescents while using significantly less energy.

Out with the Old, In with the New

Partner with Orion for a hassle-free journey to compliance and energy efficiency. We'll work with you to:

- + **Audit Your Facilities**
- + **Optimize Potential LED Retrofit Solutions**
- + **Set a Timeline for Compliance**
