

Washington Fluorescent Lamp Bans: A Quick Guide

What You Need to Know:

If you manage a facility in Washington, it's crucial to understand Bill HB 1185. This legislation aims to eliminate the sale of fluorescent light bulbs. Washington State has banned high-CRI linear fluorescent lamps with a CRI of 87 or greater effective 2023 and as of January 1, 2029, no compact fluorescent lamps (CFLs) or four-foot linear fluorescent lamps can be sold in the state.

Who's Affected?

All Washington facilities using fluorescent lamps.

- All compact fluorescent lamps with a screw base (e.g. E26) or twist-lock based (e.g. GU24).
- Tube diameters (T2, T5, T8, T10, T12) and lengths from 0.5 to 8.0 feet.
- Various types of linear 4' fluorescent lamps, including single-pin, two-pin, and recessed double contact.

Why LED?

- Fluorescent bulbs contain Mercury, which can pose health and safety risks.
- 50% or greater reduction in energy savings.
- Enhanced safety and reduced environmental impact.
- Increased fixture and component life for less maintenance and increased productivity.
- Greater light quality and illumination than fluorescents while using significantly less energy.

Out with the Old, In with the New

Partner with Orion for a hassle-free journey to compliance and energy efficiency. We'll work with you to:

- + **Audit Your Facilities**
- + **Optimize Potential LED Retrofit Solutions**
- + **Set a Timeline for Compliance**
